Improving Efficiency. Increasing Performance.

Sandhill Global Partners Joint Venture (Sandhill JV), a partnership between Miami Technical Services and Abt Global, designs and implements secure IT solutions that help our customers improve efficiency, increase performance, and meet their mission. Access to the right information at the right time is critical in any organization and at Sandhill JV, our core strength is rapidly implementing systems that integrate new and existing technology in a manner that enables fluid data access. Our agile development methodology and iterative implementation approach ensures rapid and efficient delivery of solutions that are thoroughly tested and proven to work precisely to our client's high standards and requirements.

Our strategic partnerships and teaming agreements with Original Equipment Manufacturers (OEMs) enable us to offer our customers access to a wide range of proven hardware and software solutions. Our customers experience the highest levels of expertise and support throughout their product's lifecycle.

We are a certified partner and supplier of the products and services for the following strategic OEM partners:

CLOUD SERVICES

Google Cloud Platform

APPLICATION DEVELOPMENT

ENTERPRISE CONTENT

A FULL SUITE OF IT CAPABILITIES TO MEET THE MOST CHALLENGING REQUIREMENTS

Digital Transformation

Our digital transformation methodology focuses on creating client capabilities that are customer-centric, agile, streamlined, efficient, and enable an information and service driven paradigm. Our approach is aligned with the Digital Strategy and Digital Services playbook outlined by the Federal CIO.

CLOUD SERVICES

- Our Cloud-Smart Approach drives federal cloud adoption to improve productivity, lower development costs, and reduce time to operational capability.
- Sandhill JV can Migrate, Refactor, or completely Rethink your application portfolio to take advantage of cloud technology including Infrastructure as a Service (IaaS), Platform as a Service (PaaS), or Software as a Service (SaaS).

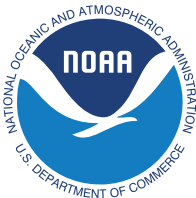

APPLICATION DEVELOPMENT

- Agile Development promotes early delivery and iterative/continuous improvement through adaptive planning, smaller release cycles, and cross-functional collaborative teams.
- Customer Centric Design ensures a positive and efficient user experience. We will guide you through the UX design process to implement applications that will provide a seamless experience for your users.
- DevSecOps ensures application security through the implementation of Secure SDLC, dynamic and static code analysis, code quality & vulnerability assessments.

ENTERPRISE CASE, CONTENT, & DATA MANAGEMENT

- ECM solutions are a proven way to deliver diverse information in a unified manner to the end customer, are completely secure, and designed to meet our client's unique needs.
- Case Management solutions using PaaS technology lead to increased speed and flexibility.
- Implementation of Integrated Solutions to focus on the core set of content data, metadata principles, and records management.
